# INTRODUCTION TO HEAT TRANSFER

D. Butterworth B.Sc(Eng.) C.Eng. M.I.Chem.E.

*Dave Butterworth*

## Contents

|  |    |  |    |
|--|----|--|----|
| Notation   | 1  | Example 3. To find the heat-transfer coefficient for natural convection on the outside of a horizontal tube  | 36 |
| Introduction   | 3  | Example 4. To find the heat-transfer coefficient for cross flow to an ideal bundle   | 36 |
| Basic concepts in heat transfer  | 3  | Example 5. To find the heat-transfer coefficient for cross flow to finned tubes  | 36 |
| Conduction, convection and radiation   | 3  | Example 6. To find the heat-transfer coefficient and critical heat flux in pool boiling  | 37 |
| Single-phase heat-transfer coefficients  | 4  | Example 7. To find the heat-transfer coefficient for forced-convective boiling   | 37 |
| Boiling coefficients   | 10 | Example 8. To find the heat-transfer coefficient for condensation on horizontal tubes  | 38 |
| Condensing coefficients  | 14 | Example 9. To find the heat-transfer coefficient for condensation on the outside of a vertical tube  | 38 |
| Fouling and scale formation  | 15 | Example 10. To find the heat-transfer coefficient for condensation inside a horizontal tube  | 38 |
| Overall coefficients   | 15 | Example 11. To find the overall coefficient for a plain tube   | 39 |
| Types of heat exchanger  | 16 | Example 12. To find the overall coefficient for a finned tube  | 39 |
| Double-pipe exchanger  | 16 | Example 13. To find the MTD-value for a counter-flow, single-phase exchanger   | 40 |
| Shell-and-tube exchanger   | 17 | Example 14. To find the MTD-value and overall heat-transfer coefficient for a counter-flow condenser which has desuperheating and condensing zones | 40 |
| Plate exchanger  | 19 | Example 15. To correct the MTD-value in Example 13 for non-counter-current flow  | 41 |
| Air-cooled, finned-tube exchangers and radiators   | 20 | Example 16. The design of a double-pipe exchanger  | 41 |
| Agitated vessels   | 22 | Acknowledgements   | 42 |
| Direct-contact heat exchangers   | 24 | British standards  | 42 |
| Heat pipes   | 24 | Bibliography   | 42 |
| A pipe in free air   | 24 |  |    |
| The elements of design   | 27 |  |    |
| Temperature-enthalpy curves  | 27 |  |    |
| The counter-flow exchanger   | 28 |  |    |
| Temperature-correction factors for non-counter-current flow                                  | 31 |  |    |
| Pressure-drop considerations   | 31 |  |    |
| Example of a design calculation  | 34 |  |    |
| Use of computers in design   | 34 |  |    |
| Physical properties  | 34 |  |    |
| Conclusion and further reading   | 34 |  |    |
| Appendix. Worked examples  | 35 |  |    |
| Example 1. To find the heat-transfer coefficient for single-phase flow in a tube             | 35 |  |    |
| Example 2. To find the heat-transfer coefficient for single-phase flow in an annular passage | 35 |  |    |
